For example, the new "Tags" panel offers a lot more places to stash metadata and rendered graphics. In the new "Preview" module, you can do a bit more than preview a single image. You can batch-select multiple facial features and adjust their size, rotation and location. You can have multiple versions of the same image rendered, cropped, or colored. As mentioned before, you can now also operate the adjustment options in an image as if you were in Photoshop. For users who haven't used it for quite some time, this may seem like an opportunity for a refresher. I think this is a big improvement from earlier versions.

Presently, the number of creative professionals claiming to be self-taught in Photoshop can be estimated at around 15%, which is a significant population of creative Photoshop users in the world today. The academic education in the area of Photoshop has always been limited or supervised by instructors who lack practical application, and this educational deficiency often results in skills-build up of the graduates. Photoshop modules are major building blocks for designing projects, and the CC module makes it easier and more efficient to do so. CC modules are mainly responsible for image modification work, and they are divided into different branches ranging from portrait, landscape and web design. New features in the Photo module, such as Quota and Snap, make it easier to quicken the retouching process. While, the upgraded Face, Hands and Layers modules introduce more editing tools for Photoshop users. The largest modules are the Creative Cloud Libraries needed to store assets and optimize for every project, and the modules which make the largest difference to the workflow of a creative user are the Adobe Page Size module and the Dynamic Link module for the web. The Gradient and the Shape Tools introduce a second way to create gradients and layers for creative editing, and the Clipping Mask module adds a new dimension to the covering and masking of objects. Adobe Photoshop browser could be a major game changer for the offline scenario and gives users the ability to preview both versions of a file without the need for the full Photoshop application.
