Membership in Photoshop.com? Unlimited. Photoshop.org? Unlimited. Membership to Creative Cloud? $50 per month. Transferred from Lightroom. My company switched to Creative Cloud because we were woefully out of control with our Lightroom and Photoshop licenses. They now have the same limitations, but no, you can't purchase a monthly membership, you have to buy it annually. Depressing! One of the things I'm most disappointed about is that full Photoshop is still not available in the iPad version of the update. I still find Lightroom a better camera app. Although, I still miss the ability to make adjustments on those wonderful Apple and Samsung cameras. I guess only time will tell if that capability comes back in a future update. Adobe added several new features, most of them in Photoshop CC. Markers are handy, because they can be used to do many things, including deleting a section of an image. The ability to move around the pixels and see results instantly is also great. Snapping to Nearest Neighbor allows you to do so, which is kind of fun and kind of annoying. Operations such as Content Aware Fill, Duplicate/Merge layers, Snapping to Tolerance, Masking, and many more choices can be performed to help you get things done quick and accurately. In a nutshell, Lightroom and Photoshop are somewhat less powerful. Many of the features that exist for PS were also available for LB. Lightroom 5, which is camera-based, offers a number of improvements. One of the big changes is that current camera file names are now displayed in the IM windows, along with your IP addresses.

When Adobe Creative Cloud launched in 2014, the marketing campaign pitched cloud as the next generation of the application. While the re-birth of the cloud may have come somewhat unplanned, the result is more centralisation into a single source of power. This doesn't mean you won't be able to access your files from any of your platforms. The new service is actually a subscription service that costs $40 per month. Lately, I was wondering how easy it would be to design a new font for Adobe Spark. Spark is a new tool in Adobe XD for building prototypes, which is part of the suite of Adobe XD Creative Cloud apps. I was curious to see how Adobe Spark's inbuilt template would work with my new font and how I would eventually introduce the new font to my work with Photoshop. So I created a project in Photoshop that would showcase the font and how it would look on both screens. Once the prototype was finished, I exported it to a.pdn file and then opened it in Adobe Spark. I was really excited when I found that the fonts were fully supported. I was pleasantly surprised that it was equally easy to use as the typography styles built into Photoshop. After a short trial, I confirmed that I could easily import my previously designed and developed style into Adobe Spark. It's really great to have extra tools for use. Minor changes and tweaks could be realized in seconds.
